CentOS Linux 7 EOL Customer Communication

February 8, 2023

Dear Cadence Customer,

There are multiple computer hardware architectures and operating system (OS) versions available for hosting Cadence products. Cadence routinely monitors both OS vendor offerings and customer demand and adjusts our support policies to stay synchronized with and focused on the workstations, servers, and OS versions our customers are using.

To that end, Cadence will end support for the CentOS Linux 7 OS on x86 architecture starting from our 2024.xx or 24.xx product releases. We no longer support CentOS Linux 8 neither CentOS Stream 8.

Updates and bug fixes to products that currently support CentOS Linux 7 can be expected to continue throughout their respective product lifecycle. If you currently run Cadence products on CentOS Linux 7, we encourage you to move to any of our supported platforms for all future product releases.

For more information about Cadence products and the Cadence Compute Platform Roadmap, visit the Support website at http://www.cadence.com/support. If you have any questions or wish to discuss an appropriate transition plan, please contact your Cadence account manager.

Sincerely,

Platform Services
Cadence Design Systems, Inc.
